

Graphical Indices of Functional Group Transformations

How to Use the Tables¹

The tables are designed to facilitate finding specific reaction transformations in the text. In some cases, a given reaction appears at several places in the book. In these cases, the primary section and page entries, where the mechanistic or synthetic details are discussed in detail for a given compound type, are indicated in bold.

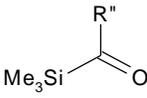

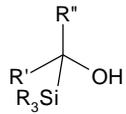

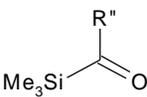

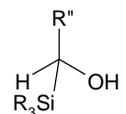

Table 1, Table 2: are collections of reactions involving the formation of organosilanes, sorted by the types of silicon-containing starting materials and products, respectively.

Table 3: lists the reactions of selected functional organosilanes in reactions leading to silicon-free products. This table is designed with synthetic organic chemists in mind.

Table 4: collects some of the reactions associated with silicon-based reactive intermediates. This table will likely be of most use to “silicon” chemists.

Table 5: is a collation of silicon-containing polymer syntheses from the book.

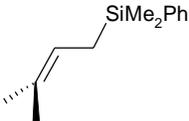

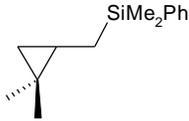

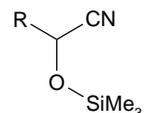

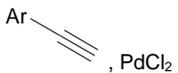

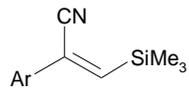

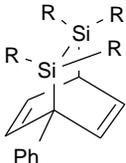

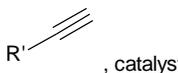

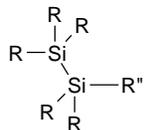

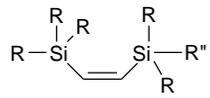

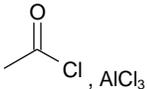

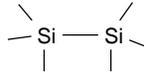

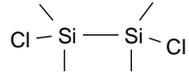

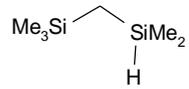

Table 1: Formation of Organosilanes (Sorted by Silicon-Containing Starting Materials)

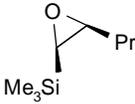

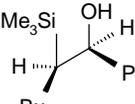

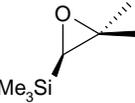

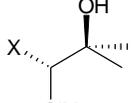

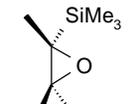

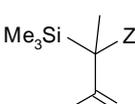

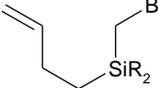

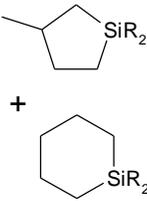

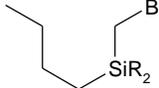

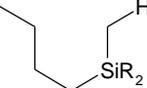

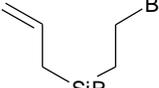

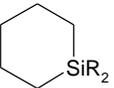

Silicon-Containing Starting Material (Organosilane)	Organic Reagent	Organosilane	Product	Reaction type	Section	Page
Acylsilanes	R'Li			Nucleophilic addition	15.7	539
	LiAlH ₄			Reduction	15.7	539

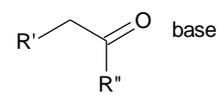

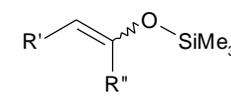

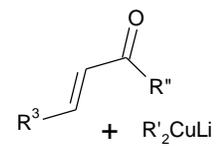

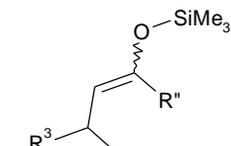

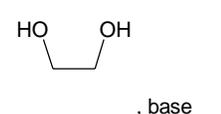

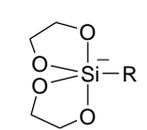

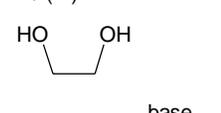

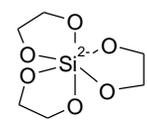

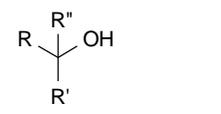

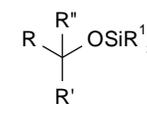

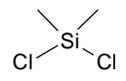

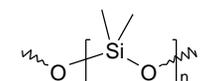

¹ These tables are available as downloadable EXCEL and WORD files from the Wiley ftp site for this book: ftp://ftp.wiley.com/public/sci_tech_med/silicon. You may also find this information on the web page starting at: <http://www.wiley.com>.

	<i>hn</i>			Rearrangement	3.5.2.1.3, 15.7	69, 541
Alkoxysilanes (silyl ethers)	 , base	RSi(OR') ₃		Nucleophilic addition, transesterification	4.2, 4.4	99, 103
	 , base	Si(OR') ₄		Nucleophilic addition, transesterification	4.5	106
	H ₂ O			Hydrolysis/condensation	9.2.2	259
	 catalyst (or silica),	R ₃ SiOR'		Hydrolysis/condensation	9.4.2, 10.2.2, 10.2.3	283, 312, 318

X^-				16.4.2
NaH, HMPA			Hyrodesilylation	16.1
E^+ (E = H, X, R, RR'COR'', RC=O), X^-, F^-			Nucleophile-induced desilylation	16.3.2
 , Pd catalyst, F^-			Nucleophile-induced desilylation	16.3.2

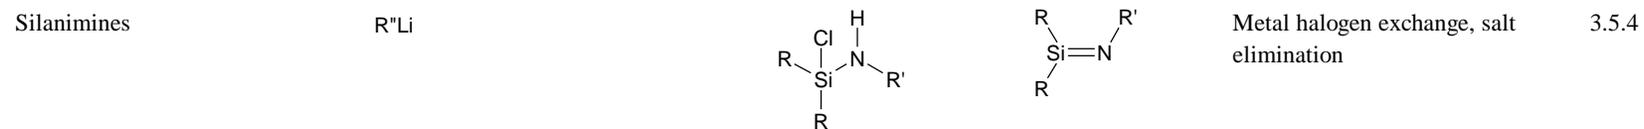

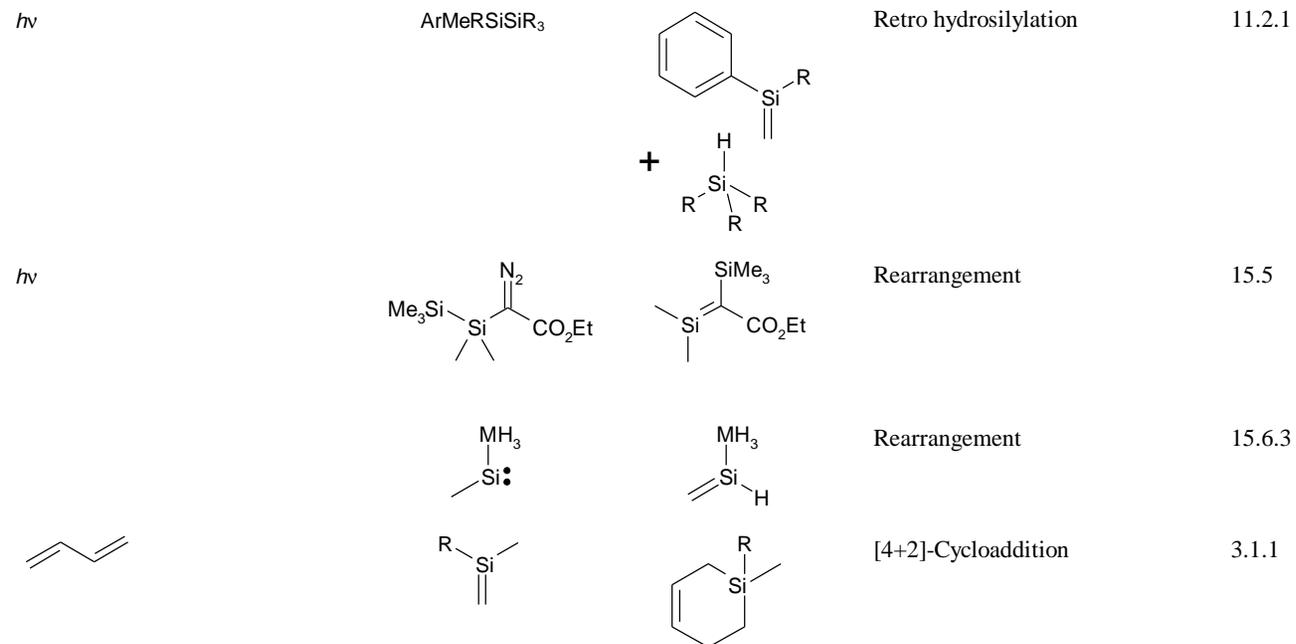

Table 4: Silicon-based and Silicon-Containing ,Carbon-based Reactive Intermediatesⁱ (sorted by number of substituents and electron count).ⁱⁱ

Silicon-based Reactive Intermediate	Organic Reagent	Organosilane	Product	Reaction type	Section	Page
Silylenes (R ₂ Si:)	<i>hν</i> 	R ₃ SiSiR' ₂ SiR ₃	R' ₂ Si:	Photolysis	11.2.1	
		R' ₂ Si:			3.1.1, 3.1.2	
				Rearrangement	15.6.3	
α-Siloxycarbenes	<i>hν</i> , or Δ			Rearrangement	14.2.1, 15.5	
α-Silylcarbenes	<i>hν</i>			Rearrangement	15.5	
Silylium Ions (silyl cations R ₃ Si ⁺)	Ar ₃ C ⁺ Y ⁻ (Y is a non-nucleophilic counterion)	R ₃ SiH	R ₃ Si ⁺ Y ⁻	Hydride abstraction	3.2	
Note that most reactions of halosilanes (above) formally go via silyl cation intermediates	R' ₃ Si ⁺ Y ⁻ (Y is a non-nucleophilic counterion)		R' ₃ Si ⁺ Y ⁻	Electrophilic substitution	3.2	

β -Silyl cations	E^+			Electrophilic addition	14.2.3.2
	E^+			Electrophilic addition	14.2.3.1, 14.2.3.3
	E^+			Electrophilic addition	14.2.3.3
	Lewis acid				15.2
	Nucleophile				14.2.3 , 15.2.1
	Nucleophile				14.2.3.4
Silyl radicals (R_3Si^\bullet)	ROOR	$HSiR'_3$	R_3Si^\bullet		3.3.1
	$h\nu$, R''_3CCl		R_3SiCl		3.3
	$h\nu$				15.4

	O_2			Autoxidation	15.4
	$R'CH=CH_2$, $R''OOR''$ or other initiator	R_3SiH	$R'CH_2CH_2SiR_3$	Radical hydrosilylation	3.3.2.1, 12.8.1, 14.2.5
Silyl anions (R_3Si^-)	RM , $R = H$, alkyl, $M = Li, K$, etc.	$R'_3SiR'_3$	R_3Si^-	Reduction	3.4.1.1
	RM , $R = H$, alkyl, $M = Li, K$, etc.	R'_3SiH	R_3Si^-	Reduction	3.4.1.2
	Li, Na, K	R_3SiCl	R_3Si^-	Metal halogen exchange	11.2.1, 11.3.1.1
		R_3SiLi, Cu			12.5
		R_3SiM		Nucleophilic addition	15.7
		R_3Si^-		Nucleophilic addition	3.4.2
	$(R'_3Si)_2CuLi$		Michael addition	3.4.2, 12.4	
	$(R'_3Si)_2CuLi$			12.4	

α -Silyl anions	Base			Deprotonation	14.2.6, 15.1.1, 15.1.3
	Base			Nucleophilic addition	14.2.6
					12.10.2, 14.2.6
	Base,				15.1.2
Disilenes		$R_2Si:$		Dimerization	3.1.2, 3.5.1.2
	Li			Metal halogen exchange, salt elimination	3.5.1.1
Silenes ($R_2Si=CR_2$)				Thermolysis	3.1.1
	$R''Li$			Metal halogen exchange, salt elimination	3.5.2.2.2
		ArR_2SiSiR_3		Sigmatropic Rearrangement	11.2.1

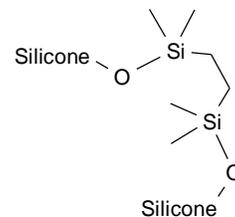

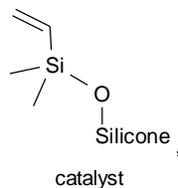

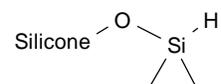

ⁱ For a definition, see Chap. 3. These reactive intermediates are silicon-containing compounds that are typically unstable at room temperature.

ⁱⁱ For each intermediate type, preparations are first listed, followed by reactions.

Table 5: Silicon-Based Polymers (sorted by product polymer type)

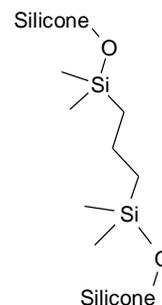

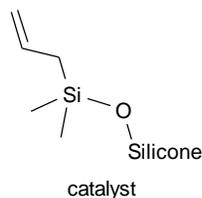

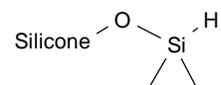

Silicon-based Product	Organic Reagent	Organosilane	Polymer Product	Reaction type	Section	Page
Polycarbosilanes, pendant -poly(vinylsilanes)	*R', R'O*			Radical addition, radical polymerization	11.1, 14.2.5	340, 500
-poly(alkynylsilanes) -polyacetylenes	WCl ₆			Transition metal Lewis acid-catalyzed polymerization	11.1	
-poly(allylsilanes) -polyacetylenes	WCl ₆			Transition metal Lewis acid-catalyzed polymerization	11.1	
Polycarbosilanes	RLi, or TM catalyst			Ring-opening polymerization	11.4	
Poly(siloxanes), silicones	H ₂ O	R ₂ SiCl ₂		Hydrolysis/condensation	9.2.1	258
	H ₂ O			Hydrolysis/condensation	9.2.2	259
	R ₃ SiOH, catalyst			Alcoholysis	9.4.1	282

Polysiloxanes (silica-reinforced, silica surface modification, coupling agents)	Silica	$\begin{array}{c} \text{RO} \quad \text{R}'' \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{RO} \quad \text{OR} \end{array},$ $\text{R}''\text{SiCl}_3$	$\text{Silica}-\text{O}-\begin{array}{c} \text{R}'' \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array}$	Hydrolysis/condensation	10.4.1	320, 324
Poly(siloxanes); crosslinked	R ₃ SiOR', catalyst (e.g., Ti(OR) ₄ , R ₂ SnO ₂ CR'), RTV	$\begin{array}{c} \text{HO} \quad \text{O} \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array} \text{Silicone}$	$\begin{array}{c} \text{R}_3\text{Si} \quad \text{O} \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array} \text{O} \text{---} \text{Silicone}$	Hydrolysis/condensation	9.4.2, 10.2.2, 10.2.3	283, 312, 318
	peroxide	$\begin{array}{c} \text{CH}_3 \\ \\ \text{Silicone}-\text{O}-\text{Si} \\ \\ \text{Silicone}-\text{O} \end{array}$	$\begin{array}{c} \text{Silicone} \quad \text{O} \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array} \text{O}-\begin{array}{c} \text{O} \\ \\ \text{---} \end{array} \text{---} \text{Silicone}$		9.4.3, 9.4.4	
		$\begin{array}{c} \text{CH}_3 \\ \\ \text{Silicone}-\text{O}-\text{Si} \\ \\ \text{Silicone}-\text{O} \end{array}, \text{ peroxide}$	$\begin{array}{c} \text{---} \quad \text{---} \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array} \text{O}-\begin{array}{c} \text{O} \\ \\ \text{---} \end{array} \text{---} \text{Silicone}$		9.4.3, 9.4.4	
		$\begin{array}{c} \text{H} \\ \\ \text{Silicone}-\text{O}-\text{Si} \\ \\ \text{Silicone}-\text{O} \end{array}, \text{ peroxide}$	$\begin{array}{c} \text{---} \quad \text{---} \\ \diagdown \quad / \\ \text{Si} \\ / \quad \diagdown \\ \text{---} \quad \text{---} \end{array} \text{O}-\begin{array}{c} \text{O} \\ \\ \text{---} \end{array} \text{---} \text{Silicone}$	Radical hydrosilylation	9.4.4, 14.2.5, for mechanism, see 12.8.1
